Trade Seed-Catalogue 1899.

A partial view of a field of Mignonette Machet in the gardens of J. C. Schmidt. — From a photograph.

J. C. Schmidt

Seedgrower and Nurseryman

by appointment of His Majesty the King of Prussia

Cable-Address: *Flowersmit, Erfurt.*

Erfurt

(Germany.)

Cable-Address: *Flowersmit, Erfurt.*

Terms, Conditions of Sale etc.

All seeds travel at purchasers' risk and will be delivered carriage paid to Hamburgh or Bremen, other charges such as for shipping and insurance will to be paid by the consignee. Flowerseeds, not less than £ 10 in value, will be delivered carriage paid to London, except those sold by Cwt. Should flowerseeds, sold by Cwt. or vegetable seeds be packed together with flowerseeds, which ar free London, the freight will be deducted in invoice.

Parcels not exceeding 5 Kilos (about 11 lb.) in weight to all parts of Great Britain and Ireland will be forwarded at 1 s. 6 d. each via Hamburgh or Bremen, at 1 s. 9 d. via Belgium. The last way is the shortest.

My customers in America and other transatlantic countries will give particular instructions for packing and shipment **with each order.** When none are given, I shall use my own judgment and pack and ship in the manner I consider most likely to ensure the safe and prompt arrival of the goods, whitout, however, assuming any responsibility in the matter.

Accounts are payable net on the first of July each year, or 3 % discount well be allowed for cash within one month frome date of invoice. **Small amounts** may be remitted in postage-stamps. — Remittances either by postal-order, cheque or draft should accompany orders, or else satisfactory, well known references should be given by firms with whom I have not yet had the pleasure of doing business.

In order facilitate business I make the following suggestions to my customers:

1. Name and address to be written distinctly and in full.
2. Write out the articles wanted as much as possible in the same order as given in the catalogue.
3. As several firms of similar name exist in Erfurt, please address all correspondence to J. C. Schmidt in full, as shown below.

All previous seed-price-lists are hereby cancelled.

J. C. Schmidt,

Seed grower and Nurseryman,

by appointment to H. M. the King of Prussia.

Erfurt (Germany).

Notice:

J. C. Schmidt sends out only seeds that will, to the best of bis belief, give entire satisfaction; it must, however, be expressly understood that, immunity from error being unattainable and success more often dependent on climatic or local influences than is generally supposed, he warrants neither description, growth nor productiveness of any seeds he sells, nor will he hold himself in any way responsible for the crop.

J. C. Schmidt should be very much obliged to his friends if they would favor him with a visit in case they pass through or come to Erfurt. He shall consider it as a special honour, to show every visitor over his grounds and give every desired information. In this way all his customers can convince themselves of the great care and attention paid to the growth of all his productions.

D. R. G. M. 92812.

New! Seed-Measuring-Maschine „Schmidt's Rapid." New!

Schmidt's „Rapid" is the only measuring and filling machine, which answers to the needs of the trade. Schmidt's „Rapid" is cheap in price, works with great ability and exactness and stands always ready for use with **hand** and **foot gear.** So surprisingly simple is this machine, that anybody can understand at once how to use it and therefore it may be said to be the most practical of Seed measurers.

Schmidt's „Rapid" whith which quantities from 4 grains to $1^1/_3$ ozs. can be measured, is not only useful in **wholesale warehouses, retail seed dealers** also will find in it **a most valuable machine** for filling up packets of seeds to sell in the shop. Apart from the quickened rate of work, this machine **soon pays for itself** through the **regularity and equality of the fillings.** The construction, nothwithstanding the elegant appearance of this machine is so strong, that it will last a man's lifetime. The way of working it **seated** is a follows: the seed is poured into the funnel and falls from there into the light and exact moveable measures, which are in the drum. A pull or pressure of the lever and the measure empties itself into the scuppers, under which a bag must be hold in readiness to catch it. As soon as the lever is let gone, the measure returns **automatically** to its place beneath the funnel. If a strap or string of sufficient length be fastened to the lever and a loop made at the end in which the operator places his heel, the machine may be worked by raising and sinking the foot. The worker then has both hands free to place under and remove the bags, thus being able to perform the greatest possible amount of work. The expensive machines we previously had, will be completely superceded by this invention and it is now possible to have an exceedingly useful help even in the smallest business. The wheight of the machine is about 15 lbs.

Price: 35 s., packing 1 s.

Novelties for 1899.

Potato „Darling of Erfurt".

With the introduction some years ago of the early potato **„Pearl of Erfurt"** a sort came into the trade, which possessed in marked degree all the necessary qualities of a good early potato. On the other hand we still were without a good **autumn- and winter-**potato. Most of the late potatoes yet known are whitefleshed and generally not of good flavour, the few yellow-fleshed late ones, which we now have, (Mühlhäuser and Blueflowering) are rather poor cropper and suffer very much from the potato-desease, so that in some years nearly all were rotten. **„Darling of Erfurt"** is a potato, which possesses all qualities requisite for a good table potato and is quite free from all the above mentioned faults.

Darling of Erfurt ripens **medium early,** it can be dug up in **the beginning of September.**

Darling of Erfurt has a **handsome symmetrical shape, few eyes, beautiful yellow skin and deep yellow flesh.**

Darling of Erfurt **is of fine flavour** and **keeps unusually well;** in May and June of the next year tubers of this novelty kept in a cellar, were like fresh potatoes in appearance and taste.

Darling of Erfurt does not get deseased when planted in **heavy claysoil,** even in the wet summer of 1897 plants in such positions produced strong and well flavoured tubers.

Darling of Erfurt is not particular at the soil and does not exhaust it; this is of the **greatest importance** to growers regarding the aftercrop.

Darling of Erfurt yielded this year on medium soil 250 Cwts. per Acre. In short:

Darling of Erfurt **is the ideal of a good autumn and winter table-potato,** wellshaped, yellow-fleshed, good flavoured, endurable, well keeping and unassuming regarding soil.

Every farmer, every garden holder must cultivate it, it will newer disappear from the market.

1 Cwt. 15 s., 10 lbs. 2 s., lb. 3 d.

Very important to Market-Gardeners!

Runner-Bean, earliest of all, longpodded ten week.

Doubtless the July-Runner-Bean having been introduced a few years ago, is and will remain one of the best of early Runner-Beans. Its only drawback from a market-gardeners point of view being, that the pods are rather short. This fault is not possessed by the **„Earliest of all, long podded ten week Runner-Bean";**

1st. It is **a few days earlier than even the July-Runner-Bean,** its name of ten week comes from the fact, that with average weather and cultivation it produces pods large enough for use ten weeks after sowing, which is the case with no other sort of bean.

2nd. As it is **unusually freebearing,** it must be trained on **tall** poles and becomes **thickly furnished with pods from top to bottom.**

3rd. Its pods have **the shape and length of those of Fillbasket-Runner-Bean,** that is they grow to as much as **9 inches long** and are **very thick-fleshed** and **delicate.** They are therefore excellent both for cooking and preserving purposes.

4th. **The pods grown 6 or more on every flowertendril,** from which fact the prolificacy of this variety may be imagined.

5th. **The seed is white,** therefore it is still fit for table use when almost in a ripe state.

6th. As this is a very strong growing sort, it is not necessary to sow more than 5 or 6 seeds round one pole. Place the poles singly in good soil at least 32 inches apart from one another, as by that means the best crop will be obtained. The above illustration is taken from a photograph of a single pole and shows the fruitfulnes etc. of this bean better than any description is able to do. **It is clear, that a bean of such early bearing qualities is of greatest value for the market, as at that time no other long podded beans are yet ready, so that they are sure to be much sought after and well paid.**

100 pkts. 50 s., 10 pkts. 5 s. 6 d., pkt. 8 d.

Rytow's Dwellinghouse-Cucumber.

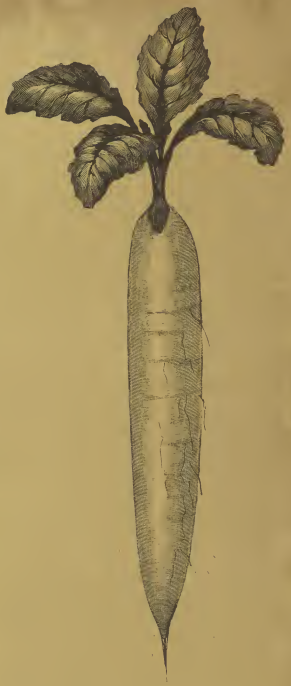

This novelty is most interesting to those who have no garden, but it will also earn much approval from those who cultivate it in the open or in frames. The adjoining illustration is taken from a photograph of this Cucumber, as several of them have been cultivated for me in various places by amateurs-Ladies, Gentlemen and children. **With our former sorts we have never been able to achieve this result; this especial sort has only accomodated itself to this want after years of careful culture.**

The cultivation is very easy. The best method is to sow the seeds singly in pots of about 2½ inches diameter and transplant after about four weeks, taking care not to damage the ball, into larger pots of 4 to 5 inches diameter. The seeds may also be sown straightly into larger sized pots, but the first mentioned method is decidedly the best. For potting this cucumber, a somewhat sandy garden soil must be used; the pots should be placed in a room, in which the temperature never gets below 50° F. Supply water when necessary, but particularly avoid keeping too moist. When the plants begin to climb, construct a light trellis of sticks behind them as sown in our illustration and tie them loosely to it. After the developement of the 8th or 9th leaf, cut off the end shoot to quicken its fruiting. Small supplements of manure from time to time (every three or four weeks) will be of good service; use „Fertilin" or some other good plant food, **but take care not to give too much.** Entirely developed the fruit attains a length of over 1 foot. but if it is desired to attain the best results. it is advisable, to cut off the first fruits as soon as they eached a length of 8 inches.

Every one having a flowerpot to hand and sufficient room at the window, can have the pleasure, through this novelty, of eating home grown Cucumbers, they taste twice as good as others.

100 pkts. (each 8 seeds) 50 s.,
10 pkts. 5 s. 6 d., pkt. 8 d.

Radish „Icicle".

This magnificent novelty receives its name from the almost **transparent whiteness** of the root, which has no comparison among all existing Radishes. The shape of the root is long and bluntended. The leaves are short, the taste exceedingly fine. One could describe this novelty as standing between the Radishes and Spanish Radishes, were it not for the fact, that it vies in earliness with the first forcing Radishes, this showing it to belong to the Radishes proper. If well cultivated **„Icicle" produces its 3½ to 4 inches long, cylindrical roots within 22 days from date of sowing.** A long, white alabasterlike Forcing-Radish has not yet existed, therefore this novelty is certain of a wide distribution, as it is equal to the other sorts in earliness and good flavor, while regarding its beautiful white colour and productiveness it is unrivalled.

100 pkts. (each ⅓ oz) 40 s.,
10 pkts. 4 s. 6 d., pkt 6 d.

Corn-Salad „Golden heart".

That a variety of Corn-Salad of the strong growth and earliness of the broad-leaved Dutch with golden yellow heart must have a pleasant appearance is certain. With the new **Corn-Salad „Golden heart"** such a sort comes before the public. This introduction grows very quickly and shows in its outside leaves the fresh green colour of the parent sort, while the **whole heart of the plant has a beautiful golden yellow colour,** hence its name. The leaves are very tender and a salad made of a mixture of the green and golden yellow leaves, not only looks very appetizing, but also tastes very good.

100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt 6 d.

Marrowfat-Pea „Ideal", earliest of all.

There are so many good sorts of Peas already in the market, that it seems to be almost impossible, to make any material improvement on them. But „Ideal" fulfils a long felt want among the large assortment of Peas. Those early sorts of Peas, which up to the present have been known by the trade have mostly a smooth seed and short pods and as a rule become hard very soon and are unsuitable for the kitchen. The few very early Marrowfats, such as „American Wonder etc.", are low growing and also short-podded, therefore are capable of producing only a moderate crop.

„Ideal" reaches a height of about 30 inches and is therewith only three or four days later than the very earliest smooth seeded May-Peas, it produces wonderfully large and ful pods, 4 to 5 inches long and containing 10 or 11 fat wrinkled peas, of the choicest flavour of the finest Marrowfats and keeping it even when they are beginning to get hard.

Every market-gardener and possessor of a garden will be highly pleased with the superior qualities of this novelty.

100 pkts. (each 1²/₅ oz.) 40 s., 10 pkts. 5 s., pkt. 8 d.

Radish „First Number."

New varieties of Radish have been introduced every year indeed, but as a rule, they soon disappeared from the Catalogues again. „First Number" is the **finest, scarlet, ovalshaped Forcing-Radish now in existance** and in every respect surpasses the last years novelty „Radish first crop." The **roots** of this new variety are very **handsome** and **ovalshaped,** the colour is a **splendid scarlet** and very remarkable as not found among all existing Radishes. The foliage is short and three leaves only are generally produced. The tops of the roots generally grow somewhat out of the earth, thus showing their beautiful colour some distance. A special advantage is the earliness of this novelty as the name says. If sown at the same time as other varieties, it will be ready for use **much earlier.** Its flavor is unsurpassed. In short: **it is a first class-novelty in every respect.**

100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.

Beetroot, finest half long „Negro".

This sort has quite the **darkest flesh** of any now in the trade and is of a deep almost black red colour. The root itself is of a nice, long thin form and the foliage of a reddish dark green hue.

This novelty is greatly to be recommended as a market variety.

100 pkts. 32 s., 10 pkts. 4 s., pkt. 6 d.

Parsley, „Dwarf Perfection".

In shape, colour and taste this variety is of the most perfection among all Parsleys. **The leaves are ornamentally crisped, the growth is compressed, spreading and thick, so that the plant forms almost a half globe.** Unrivalled as an edging for beds etc. in the vegetable garden.

100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.

Giant dwarf Bean „Emperor William improved".

The well known and highly appreciated dwarf Bean Emperor William, which is known as being one of our best varieties of open ground and forcing Beans, attains its greatest perfection through this introduction. This novelty seems to be qualified in time to supersede the old Emperor William-Bean; **its pods attain an astonishing length even to 10 inches and therewith is this variety quite as early and more prolific than its original sort.** It is quite useless to say any more in its praise; everyone, who grows it instead of the old sort, will give it the preference absolutely.

100 pkts. (each 1²/₅ oz.) 40 s., 10 pkts. 4 s. 6 d., pkt 6 d.

Dwarf Bean Emperor William yellowpodded Wax.

This new variety of **Wax**beans, originating from the greenpodded Emperor William Bean, has all the same good qualities as this; except this novelty being ready for use nearly a week earlier, and the numerous long fleshed pods are of a nice yellow colour.

100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.

Marrowfat Pea „Nero".

A new marrowfat of great bearing qualities, growing to a height of about 6 feet. **The blossoms are of a pretty violet colour and the pods, which are also of a fine dark-violet colour, grow always in pairs, attaining a length of about 4 inches and are filled with sweet juicy peas.** The colouring of the pods makes it almost impossible to overlook them in picking.

100 pkts. 50 s., 10 „ 6 „ pkt. 9 d.

New Cabbage, Bamberg white earliest of all.

An excellent new variety which produces large firm heads of exceedingly fine flavour surpassing all other varieties. Excellent kind for market gardeners.

100 pkts. 40 s., 10 pkts. 5 s., pkt. 8 d.

Runner-Bean, yellowpodded Fillbasket Wax.

Of the same good quality, as the wellknown greenpodded Fillbasket. The pods are very long and fleshy and the plant is an excellent cropper.

100 pkts. 40 s., 10 pkts. 5 s., pkt. 8 d.

Runner-Bean, longpodded Sword with violet pods.

This new Runner-Bean bears pods of the same length and largeness as the old good variety greenpodded Sword, but the pods are of a deep-violet colour.

100 pkts. 40 s., 10 pkts. 5 s., pkt. 8 d.

Convolvulus tricolor compactus,

various colours mixed.

Our creeping kinds of Convolvulus are already great favorites owing to the ease with which they are grown and their long-flowering season. **But the above new addition raises them at once to the level of pot and bedding plants.** Owing to their loose, straggling mode of growth the old sorts were quite unfit for this purpose. But a bed or even a single pot of the new beautiful **Convolvulus tricolor compactus** produces an attractive sight as the above illustration, reproduced from a photograph will show. In some

Convolvulus tricolor compactus,

various colours mixed.

ways the plant rather reminds one of our compact growing Petunias; **it is also covered with flowers and in the mixture are represented all colours from white to deep violet. This novelty decidedly is one of the best hardy annuals, which will this year be introduced to the trade.** Like the old sorts, the seeds of this grow in the open ground, but for cultivation in pots it is better to sow in pots or in a frame.

100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.

Aster, dwarf Comet Perfection, pure white.

This beautiful new Aster is the result of a cross between the giant Comet-Aster and the dwarf Chrysanthemum-Aster; from the former it has inherited the **beautiful form of its pure white flowers, which attain a diameter of 4 inches, from the latter its dwarf habit of growth, which does not much exceed 7 inches, thus making it especially valuable as a pot plant and also for bedding purposes.** One particularly good point about this Aster is that its flowers open **at the beginning of July, even before the „Queen of the Market-Aster",** it is therefore **the earliest of largeflowering white Asters** and as such exceedingly useful **for cutting, also its Japanese Chrysanthemum like flowers far excel all other Asters flowering at the same time.**

100 pkts. (100 seeds each) **60 s., 10 pkts. 7 s., pkt. 9 d.**

Campanula persicifolia grandiflora (Backhousei) flore pleno, blue,
„ „ „ „ flore pleno alba, white.

The new largeflowering varieties of Campanula persicifolia, which we have now possessed for several years, have quickly succeeded the old smallflowering varieties for cutting purposes; **even so will the above, which is now being offered to the public, soon be much sought after and prefered to the old smallflowering double varieties.** The annext reproduction from a photograph shows the plant half its natural size, **mark the splendid double flowers, which attain a diameter of 1 1/9 inches. No grower of flowers for cutting purposes or lover of hardy perennials should be without specimens of this lovely novelty.**

Campanula persicifolia grandiflora (Backhousei) flore pleno, blue
100 pkts. (of about 150 seeds each) 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.

Campanula persicifolia grandiflora (Backhousei) flore pleno alba, white
100 pkts. (of about 150 seeds each) 40 s., 10 pkts. 4. 6 d., pkt. 6 d.

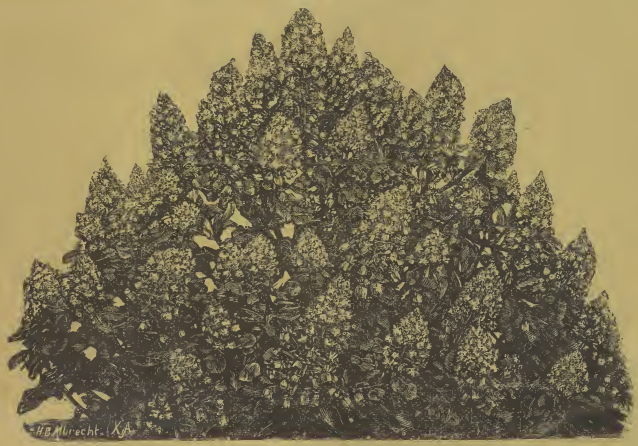

Helianthus cucumerifolius „Orion".

This novelty is worthy of the widest distribution, it is a sport of **Helianthus cucumerifolius „Stella"**, which was introduced a few years ago and has attained great popularity for cutting „Orion" will soon be as popular as its parent. It has all the good qualities of „Stella", **but the petals of the flower are twisted, so that it reminds one of the flower of a yellow coloured single Cactus-Dahlia.**

100 pkts. 40 s., 10 pkts. 5 s., pkt. 8 d.

Reseda „Bismarck".

With this novelty might the improvement of this favourite flower of every lover of the garden, well be said to have reached its highest point; Reseda Bismarck ranks as high over the until now most useful and everywhere appreciated Reseda Machet, as that over the old Reseda odorata grandiflora. **It originates from Reseda Machet, but its flower-heads are twice as large as those of the parent sort and are borne on strong stems high above the thick, dark green, somewhat corrugated foliage; the growth of the plants**

Reseda „Bismarck".

is from the beginning broad and sturdy, the bushes do not exceed about 1 foot in height, the flowers are of a reddish hue and very sweetscented. This Mignonette is not to be surpassed for the garden, the flowertable, for any floralwork or for growing in pots. The value of this novelty can be better recognized than from descriptions, by looking at the adjoining photographic reproduction of it.

100 pkts. 60 s.,
10 pkts. 7 s.
pkt. 9 d.

Prominent Novelty!

J. de Langhe-Vervaene's Cyclamen „Papilio"

with fimbriated and curled petals (see cut).

Awarded many gold and other medals, also a first class certificate by the Royal Horticultural Society of London and the National Horticultural Society in Paris.

Every lover of Cyclamen must have this novelty, every nurseryman must cultivate it!

In addition to the well known characteristics of our best Cyclamen, fine habit of the plant, beautiful markings on their leaves, great freeflowering qualities and noble shape and large size of the flowers, this novelty has the special peculiarity, that the edges of the petals are prettily fimbriated and curled, which lends to the plant a particularly attractive appearance.

The seed are of all the best colours from white to dark red mixed.

1000 Seeds £ 11.—, 100 seeds £ 1.5, 10 seeds 3 s. Net.

A coloured plate will be sent free on application.

This novelty has been described and recommended in all the best English and Foreign Horticultural papers.

Chrysanthemum carinatum „Chamaeleon".

A new large flowering variety of this popular and useful summerflower, which cannot fail to please. In the first stage of flowering the ground colour of the rayed flower is a pretty light-bronze with a purple zone and the dark purple disk is surrounded by a circle of golden yellow. After some days the ground colour changes to a beautiful cream. The four distinct colours in each flower and also the different coloured flowers on one plant makes a gay display and has a splendid effect.

100 pkts. 40 s.,
10 pkts. 5 s., pkt 8 d.

Gloxinia hybrida grandiflora erecta „Snow-Queen".

This new Gloxinia is a decided improvement on all the white Gloxinias, which have as yet been offered to the trade. **It is of faultles upright habit of growth, with very thick, dark-green leaves, the flowers are of a beautiful snow-white colour and very large. Gloxinia Snow-Queen certainly is qualified to become a first class plant for the market.**

100 pkts. (of 200 seeds each) **60 s.,**
10 pkts. 7 s. pkt. 9 d.,
Bulbs 9 d. each, 10 for 6 s.

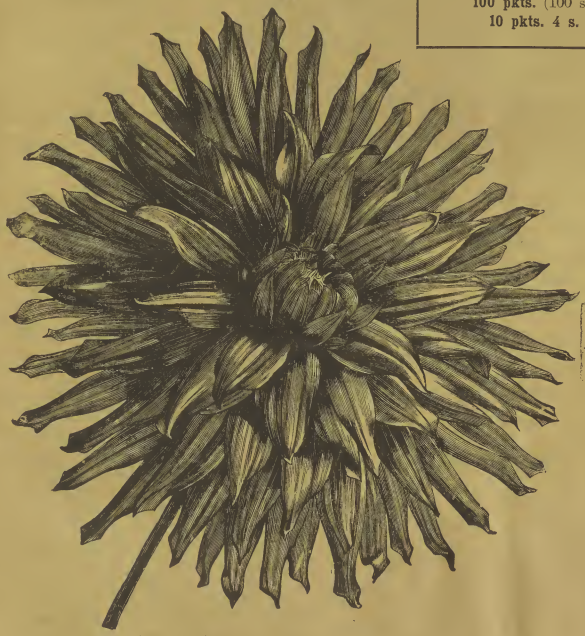

Autumnal and Winter Wallflower, single dark brown Erfurt.

This new Wallflower is a cross between the single flowering yellow Paris and the double dwarf branching dark brown Wallflower. It hat inherited altogether from the former the exceedingly rich blooming and from the latter the fine habit of growth, the deep green foliage and the dark brown flowers. Owing to these excellent qualities it is **a most valuable addition to our cutflowers for autumn and winter use,** as they begin to bloom already from the **middle of February** without heating, by sufficient air and light.

The method of cultivation does not much differ from those of other varieties of Wallflowers; it is advisable to make several sowings, in March, April and Mai and to plant them in pots also from time to time. For autumn flowering one part of the first sowing should be kept in the open ground.

100 pkts. (100 seeds each) **40 s.,**
10 pkts. 4 s. 6 d., pkt. 6 d.

The best new Cactus Dahlias.

The two sorts mentioned below are among the best new varieties of the true Cactus-Dahlia. All authorities, who have seen them in my nursery this summer, have been astonished at their beauty and good quality; they therefore deserve a place in all plant catalogues.

Cactus-Dahlia „Trump".

(J. C. Schmidt.)

As regards the fine cactus-shape of the flower this novelty excels the best of last years english novelties. The flower is about 5 inches in diameter and very double, but its appearance is notwithstauding light and **graceful** owing to the petals which are **twisted and recurved.** The annexed illustration gives some idea of the beautiful shape of the flower, **in reality they are much more beautiful.** The colour is very fine, but is hardly to be described: **bright orange-scarlet, changing to violet pink at the points of the petals.**

In addition it possesses good qualities, which are wanting in many novelties: the very **fine sturdy growth** of about 2½ feet high, the handsome **darkgreen foliage,** above which the blooms are borne **freely** on **strong stalks.** The novelty is altogether **early and freeflowering.** Not only is this a useful Dahlia for garden decoration. but it will also be found of great value as a cutting flower

Rooted cuttings ready in May: 1 s. each, 10 for 8 s.

Cactus-Dahlia „Bravo."

(J. C. Schmidt.)

This is a sister of the foregoing with just the same splendid qualities regarding growth, foliage, size and shape of the flowers, only the colour is a conspicious dark scarlet, whose equal is not to be found among other Cactus-Dahlias.

Rooted cuttings, ready in May: 1 s. each, 10 for 8 s.

Canna variegata.

This quite distinct new Canna is not of so much importance as regards its flowers as in regard to its leaves. Its growth is dwarf making it suitable for growing in pots and decorating purposes. **Its leaves are light green, thickly sprinkled, blotched and lined with red and yellow and edged with light red.** It is worthy to be classed with the first foliage plants. When planted out, the variegation of this Canna is of a far more striking effect.

100 pkts. 48 s., 10 pkts. 6 s., pkt. 9 d.

Aster, dwarf Mignon,

1. white 2. crimson.

Small forms of nearly all the better types of Asters have been up to the present, now raised herewith a dwarf form of the lovely Mignon-Aster is also placed before the public. This grows to about 10 inches high, the plants branch just above the ground and produce their half globe shaped flowers, which are quite of the parent type, on long stalks. For cutting, for bedding, bordering or for pot cultivation, this novelty is of great value.

Of either colour: **100 pkts. 48 s., 10 pkts. 6 s., pkt. 9 d.**

Myosotis alpestris „Star of love".

This novelty is most like the well known Myosotis Victoria, but is to be distinguished from this and every other variety by its **low compact growth, regularity of height in all the plants, unrivalled number of flowers produced** and **long flowering season.** The foliage of „Star of love" is like that of the palustris varieties, **very luxuriant, dwarf** and of a **fresh green colour.** The single leaves grow to about $1^1/_2$ inches and $^3/_4$ inch broad, the plants themselves attain regularly a height of about 9 inches. The single flowers of the beautiful heads are about $^2/_5$ inch across and of a lovely pure skyblue giving an attractive sight even if lookes from a long distance. This novelty begins to flower about a week before any others and is still bright with flowers when they are over. The low growth of this variety makes it very useful for carpet bedding and edging. It comes quite true from seed, as it has been proved for several years.

100 pkts. 50 s., 10 pkts. 6 s., pkt. 9 d.

Iberis coronaria princeps.

Candytuft „Little Prince".

A lovely variety only 4 to 5 inches high, originating from the well known Iberis „Empress", which is twice that height. Like the parent form it produces strong bushes, with large pure white flowerheads, which rise sturdily up above the dark green foliage, consisting of 4 or 5 leaves, which are arranged in candelabrum like form around the main stem. It continues flowering much longer than „Empress", for which reason this novelty is exceedingly useful for cultivation in pots and bedding purposes.

100 pkts. 48 s., 10 pkts. 6 s., pkt. 9 d.

Petunia hybrida grandiflora fimbriata „Miranda".

A beautifully fringed, largeflowering Petunia, originated from the brilliant pink, but the colour is much more intense and merges into scarlet in the throat.

100 pkts. 56 s., 10 pkts. 6 s. 6 d., pkt. 9 d.

Three new „Cupid" Swet-Peas.

Mr. Burpee offers this season 3 excellent varieties of his wellknown „Sweet-Pea, dwarf Cupid", only 6 to 7 inch tall growing.

1. **Alice Eckford,** creamy-white to flesh-pink;
2. **Beauty,** rose to rosy-carmine;
3. **Primrose,** of a rich creamy tint, as the tall sort.

These novelties I have tried myself in my own ground this year and I can say they are all very compact growing, very pretty and exceedingly floriferous. Excellent plants for potculture, for borders and dwarf groups.

I offer to Mr. Burpees prices:

100 pkts. (12 seeds each) 30 s., 10 pkts. 4 s., pkt. 6 d.

Rosa polyantha multiflora.

flowers 6 to 8 weeks after sowing.

Fresh berries: 1000 berries **12 s.,** 100 berries **1 s. 6 d.**
Clean seed: 100 packets **20 s.,** 10 packets **2 s. 6 d., pkt. 4 d.**

Valuable introductions of last year, worthy to be recommended.

Savoy earliest Ironhead.

Large — tender — firm!

Our early varieties of Savoy yet known do not fulfil all the demands concerning qualities of a good vegetable. Either they are too small — for instance the „Tom Thumb", „Vienna" and others —, or else they are not firm and constant such as the early „Kitzing", „Johnsday" and others. The new **„Ironhead"** possesses none of the faults. It is **the earliest of all, of a nice round shape, of a fresh darkgreen color, passing to yellowish green in the centre, large like a late variety and thereby as solid headed as a good cabbage variety.**

After it was introduced last year, it has excited general sensation and it is quite certain, that it will become the very best of early standard market varieties; therefore no seed catalogue should miss it.

100 pkts. (of about 500 seeds each) 30 s., 10 pkts 3 s. 6 d., pkt. 5 d.

Savoy Ironhead.

Forcing-Cucumber „Queen of the table".

A new pure white Forcing-Cucumber of astonishing productiveness, producing fruits of long regular shape up to 2½ feet in length with firm and tender flesh of exquisitly fine flavour. **100 pkts. 60 s., 10 pkts. 7 s., pkt. 10 d.**

Campanula mirabilis.

This new variety undoubtedly is the most beautiful of all Campanulas. In form and size of the flower and its calyx, it belongs to the class of Campanula Medium, but does not resemble any of the yet known Campanula. The plant forms close over the bottom a densely branched pyramid, growing up to 20 to 24 inches high and broad. Every branch bears on its top a great number of pretty light blue or lilac flowers, combining a magnificent pyramid of more than hundred flowers. The queer leathercolored leaves are trimmed with thin pointed teeth, similar crenated are the calyx-leaves. In all respects this novelty is a beautiful appearance, which will be an attraction whereever it might be planted. The lucky discoverer himself says, that it is impossible to give a real idea of the extraordinary beauty of this plant in descriptive words. **100 pkts. 50 s., 10 pkts. 6 s., pkt. 9 d.**

Awarded a large Silver-State-Medal at Hamburgh 1897.

Ostrich-feather-Aster, white.

This magnificent new Aster, originating from the Goliath-type, bears some resemblance with the giant white Comet-Aster. The principal distinction is in the **candelabrum-like habit of growth** and its **far better floriferousness,** but the **greatest merit is to be found** in their **flowers of immense size, averaging 6 inches in diameter,** of a beautiful snow-white color, **combined of much longer petals and still more loosely formed,** thus equalling the best Japanese Chrysanthemums. For modern bouquet-work, for arrangements in vases, baskets etc., these longstemmed magnificent flowers are an invaluable material. **No gardener wanting Asters for cutting purposes, should fail to procure this „Gem" among Asters.** The great merits of this new Aster have been appreciated by award of a large Silber-State-Medal at the International Horticultural Exhibition at Hamburg 1897.

100 pkts. 40 s., 10 pkts 4 s. 6 d., pkt. 6 d.

Begonia semperflorens „Zulu-King."

Black Begonia.

Awarded a large Silver-State-Medal at Hamburgh 1897.

Many good varieties of Begonia semperflorens have been introduced in recent years, but none of them caused such a sensation at their first appearance, as „Zulu-King." It is of the same luxurious growth and abundant blooming as the original kind. The principal distinction is found in its sturdy habit of growth and the more round shape of the leaves, which are formed around the stem thus giving the whole plant a rather crisped appearance. The color of the stem and foliage is a beautiful dark-black-red, which makes an exceedingly attractive effect if grown out of doors in summer. The flowers of a brilliant scarlet with golden yellow stamens are produced in the greatest profusion from spring until late in autumn and beautifully contrast against the remarkable dark foliage. Owing to its beautiful colouring, the foliage is a valuable material for different floral designs.

If grown indoors or under glass, the colouring of the plant is not quite so effective, nevertheless the Begonia „Zulu-King" is an exceedingly valuable acquisition for indoor decoration regarding its indefatigable blooming from spring until autumn. This variety comes more than 50 % true from seed, being a very satisfactory result for such a novelty; plants however, which have been grown from cuttings, are always more elegantly shaped and of darker foliage than seedlings, but the latter are also very pretty.

Owing to the above mentionned excellent qualities, this Begonia „Zulu-King" is a first class bedding plant and a decided acquisition for the market.

Seed: **100 pkts. of 250 seeds each 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.**

Young plants from cuttings (quite true) for next spring delivery: **100 plants 20 s., 10 plants 2 s. 5 d., each 4 d.**

Balsams, improved camelliaeflowered „Alba perfecta", pure white.

Every one should give special attention to this novelty. A really **densely double pure white** flowering Balsams has not been in existance up to date and this new variety fulfils all the demands concerning the above mentionned qualities. The flowers are not only of the same noble form and of the same strong double structure as the other colors of the improved camellia-flowering Balsams having been raised yet, but also the whole appearance of the plant must be called exceedingly beautiful and the stems are so closely furnished with flowers, that a group of this new Balsam makes a beautiful effect and never will fail to please. **100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.**

Received an Award of merit from the Society of German Nurserymen, also a large Silver-State-Medal at the Hamburgh-Exhibition 1897.

Petunia hybrida grandiflora superbissima „Favourite".

This new Petunia is a variety of the **Superbissimatype,** the flowers are of an **extraordinary large size** and **greatest perfection.** But the most important distinction is in the peculiarity of colouring, of such a **loveliness and tenderness, as not yet existing among all varieties of Petunias.** The groundcolor being a delicate creamy white remarkably interweaved with green nerves, then turning to an indescribable coloration at the outerlobes, being a mixture of pink and lilac.

The committee of the Society of German Nurserymen, having been sent for judgment, unanimously stated the great value of this novelty and acknowledged this in the Award of merit with expressions of praise.

100 pkts. 40 s,
10 pkts. 4 s. 6 d.,
pkt. 6 d.

Gloxinia hybrida grandiflora, „Cyclopes" and „Goliath".

These two magnificent hybrids unquestionably excel all other Gloxinias for beauty and grow nearly true from seed. Belonging to the „erectatype", their distinguishing features are the very **elegant growth** and the **extraordinary large size** of the **splendid coloured flowers, averaging 4 to 5 inches in diameter.** The leaves are large, of a rich dark-green color with silvery-grey nerves.

„Cyclopes" is velvety bright carmine, becoming more light near the broad white edges; the throat is white and fine purple speckled.

„Goliath" is velvety purple-violet, turning to azure-blue near the broad white edges and the throat being beautifully speckled.

Of each: 100 pkts. 50 s., 10 pkts. 5 s. 6 d., pkt. 9 d.

Myosotis alpestris „Triumph".

New everblooming Myosotis robusta grandiflora.

Last year the Myosotis alpestris „Distinction" was introduced as being the first representative of a new class of „Forget me not", beginning to flower in from 6 to 8 weeks time, which soon met with universal admiration. The present novelty **„Myosotis alpestris „Triumph"** now offered for the first time, **is the second variety of the above mentionned new class.** But while „Distinction" remains dwarf and is more adapted for cultivation in pots, the new „Triumph" **fully equals in size, habit of growth and flower our well known and for cutting purposes highly appreciated variety „Myosotis alpestris robusta grandiflora" (Elise Fonrobert).** Its principal advantage is that it may like „Distinction" be sown at any time of the year, beginning to flower in from 7 to 8 weeks time and continuing to flower during a long time. **If sown in July or August, „Triumph" will be in flower all through the winter in a house or conservatory.**

100 pkts. 36 s., 10 pkts. 4 s., pkt. 6 d.

Petunia hybrida grandiflora superbissima „Venus".

A highly appreciable counterpart to the foregoing represents this novelty. Belonging to the same class as „Favourite", it is of equal beauty and perfection of flowers. Only the color again is another but peculiar too; it is a splendid carmine with white of such a charm and beauty, as not seen before amongst Petunias as well. Beside „Favourite" this novelty found the general public fancy at the Hamburgh Exhibition and was also awarded the large Silver-State-Medal.

100 pkts. 40 s., 10 pkts. 4 s. 6 d., pkt. 6 d.

Myosotis alpestris stricta coelestina.

Skyblue pillar shaped Forgetmenot.

It grows straight perpendicular, without ever bending to the side and is exceedingly floriferous. The flowers are of a beautiful skyblue colour.

100 pkts. 30 s., 10 pkts. 3 s. 6 d., pkt. 5 d.

Reseda odorata grandiflora Machet-Ruby.

Flowers of a bright copperyscarlet, a colour not yet in existence among all sorts of Mignonettes. It has quite the noble structure of the „Machet". Flowerstems are long, thick and blunt ended and dressed with vigorous foliage.

100 pkts. 26 s., 10 pkts. 3 s., pkt. 5 d.

Notice.

This catalogue contains a selection of the leading varieties of Vegetable and Flower Seeds only. All other varieties, also Tree- and Fern-Seeds gladly will be offered by correspondence if desired.

Annuals, Biennials, Perennials and Greenhouse Plants.

Explanation of the signs employed in this List:

⊙ designates the Annuals, ♂ the Biennials, ♃ the Perennials, ⌓ the Greenhouse Plants, § the Climbers, ♂⊙ or ♃⊙ the Biennials or Perennials which if sown early, flower the first year. Two signs indicate that the species combines the two characaters thereby expressed. Where no sign is appended, the one preceding is valid.

Trade Customers

will kindly take notice of a very showy, cheap and ready selling article for which a great demand has ensued. Pockets with coloured representations of Flowers and Vegetables are indeed no Novelty in England and America, but the pictures are primitively executed, and not elegant and attractive, while the **article I now offer cannot fail to please.**

My introduction consists of **Pictorial Envelopes for small Flower-seed Collections in 2 exquisite designs, Pictorial Flowerseed-Pockets in over 140 of the most popular varieties and Pictures of 43 of the best vegetables, which stand in their execution far above those now in use.** I supply Pictorial-Envelopes and Flowerseed Pockets as well as Vegetables Pictures at the following **very low** rates.

Pictorial Envelopes

for small Flower-seed Collections
4 inch. by 6 inch. in 2 splendid designs, ready for filling.
Price 8 s. per 100 or 75 s. per 1000 Envelopes.

Pictorial Flowerseed-Pockets

$3^1/_8$ by 2 inches, ready for filling, **with name below the picture and cultural directions in English, German and French on the back** in 140 varieties (les than 100 Pockets at once in all or 10 Pockets of one separate kind cannot be supplied).

Samples showing size and artistic execution of my Pictorial-Flowerseed-Pockets:

Dianthus Heddewigi laciniatus.
Gemischt. Mixed. En mélange.

Cyclamen persicum giganteum.
Gemischt. Mixed. En mélange.

Price for 100 to 500 10 d. per 100 Pockets.
„ 500 „ 10000 . 7 s. „ 1000 „
for more than 10000 6 s. 6 d. „ 1000 „
Sample Collections, one of each variety 1 s. 5 d.

Names of the Varieties see other page.

Ohlenroths's Printing-Office Erfurt (Germany).
